ASSIGNMENT-15.2

Backend API Development: Creating RESTful services with AI

T.Varun
2403A51L05
Batch-51

Task Descriptor-1: (Setup Fast API Backend)

PROMPT: Generate a basic FastAPI application with one GET endpoint returning a welcome message

INPUT:

OUTPUT:

Explanation: FastAPI uses decorators to define API routes easily. The root endpoint returns a JSON response when accessed.

Task Descriptor- 2: (API – Create and Read Items)

PROMPT: Create FastAPI endpoints to add and retrieve items using a Python list

INPUT:

OUTPUT:

```
@app.get("/items")
def get_items():
    return items
```

```

Responses

Code Description Links

Explanation: GET retrieves all items stored in the list. POST adds a new item into the list.

Task Descriptor- 3: (Update Existing Item)

PROMPT: Create a PUT endpoint to update an item using its index.

INPUT:

```python
from fastapi import FastAPI
app = FastAPI()
# Temporary storage
items = []
# Task 1
@app.get("/")
def read_root():
    return {"message": "Welcome to AI-powered FastAPI"}
# Task 2
@app.get("/items")
def get_items():
    return items

@app.post("/items")
def add_item(item: dict):
    items.append(item)
    return {"message": "item created", "item": item}

# Task 3
@app.put("/items/{index}")
def update_item(index: int, item: dict):
    if index >= len(items):
        return {"error": "Item not found"}
    items[index] = item
    return {"message": "Item updated", "item": item}
```

OUTPUT:

```
PS C:\Users\sarik\Downloads\fastapi-lab> & C:/Users/sarik/Downloads/fastapi-lab/.venv/Scripts/Activate.ps1
